## **CLOUD SENSOR DATA STORAGE AND ANALYTICS**

*Storing and accessing sensor data simplified with cloud computing*

**Martinsburg, Pennsylvania, United States, May 10, 2018:** Canary Labs announces the release of the Canary Cloud and Axiom tools specifically for the Southeast Asian market due to a strategic partnership with Matrix Invent. Based in the Kuala Lumpur region of Malaysia, and with offices throughout Asia and Australia, Matrix Invent is a Certified Partner with Canary Labs.

Assisting companies with the acquisition, storage, and analysis of sensor data since 1985, Canary has over 18,000 installs of its data historian in more than fifty countries around the world. More than fourteen different industries use Canary software, including process manufacturers, oil and gas producers, and power generation companies. Three years ago, Canary began offering their data historian as a cloud hosted solution. When paired with their browser-based trending and dashboarding tool Axiom, clients can immediately begin to realize the benefits of cloud computing from any device or location.

Hosting your company's sensor data in the Canary cloud allows for faster project deployment and scalability while greatly reducing upfront capital expenditure. It also increases your data security, and significantly expands the availability of your sensor data across your entire operation. Cloud data hosting also reduces the risk of data loss, provides a robust data recovery option, and can lead to data availability of more than 99.999% annually.
